

Pandemic Flu

1. The Pandemic Flu is one that could affect the entire world.
2. While there should not be an immediate panic, experts say it is something that could occur in the near future and should be addressed.
3. To be prepared you should have a basic Disaster Preparedness Kit (example is located at the back of this calendar) and include a few paper nodule masks.
4. Be prepared to react calmly in a time of confusion and panic.
5. Travel will be limited and could be regulated by the government so have your supply kit stocked.
6. A critical shortage of medicine, food, and fuel could occur, but will only last a short time.
7. Remember, the way you respond to the crisis will either contribute to the problem or make it easier to handle.
